# Effective Communication of Evaluation Results and Learning

Per Mickwitz
Finnish Environment Institute (SYKE)

Environmental Evaluator's Networking Forum 9.6.2009

#### Motivation

- In my opinion the biggest challenge for environmental evaluation (and evaluation in any other field) is to produce evaluations that are actually used for learning (& development) or for accountability.
- Still we mainly talk about methodological aspects that are secondary for enhancing use (e.g. Birnbaum and Mickwitz 2009).

## Effective Communication of Evaluation Results and Learning

Structure of the presentation

- What are evaluation results?
- What kind of learning?
- Different kind of communication

### What are evaluation results? (What is it that should be communicated?)

- Empirical results and recommendations
- Theoretical results
- Evaluation methods
- Evaluation framings and further knowledge needs
- There is more to communicate than just the empirical results and the recommendations.

### What kind of learning?

- Not just instrumental use but also conceptual, legitimizing and ritual use (e.g. Weiss 1998).
- Learning can take place at many levels; individuals can learn but so can organizations.
- Single and double loop learning (e.g. Argyris 1999, Leeuw et al. 2000):
  - in single loop learning an organization develops its practices so as to perform its task more successfully
  - double loop learning means that the tasks and the fundamental conditions for accomplishing them are also re-examined.

### The paradox of making evaluations useful

- When dealing with complex issues learning takes time and requires repetition. When learning involves many actors issues needs to be discussed, and often for quite a long time.
- Learning might require that many evaluations produce and disseminate similar results.
- But, for an evaluation to be seen as useful it should produce new results, i.e. results not also shown by earlier evaluations.

### Communication strategies

#### Dissemination strategies

- The reporting method
- The "broker" method
  - Steering groups, consultants or facilitators
- The network method
- The demonstration method
- The education method
- All dissemination strategies can be used through out the evaluation process

#### Production strategies

Interactive; also evaluation questions and methods change

**Evert Vedung** 

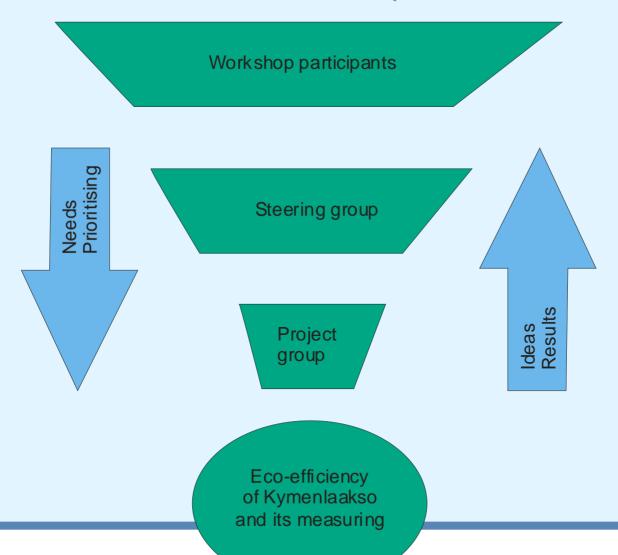

## Some comments on the "Dissemination strategy"

- Often learning is best promoted when the results are re-disseminated by somebody else
  - Evaluation findings by Hildén et al. 2002, Melanen et al. 2002 and Kivimaa & Mickwitz 2006 might be used for learning after being included in OECD 2009.
- Learning might be best promoted if the results are internalized by the "broker" or the receiver.
  - Then the results are not "linked" to the evaluation anymore.
  - This is also against the "academic instinct" where quotations and "ownership" are essential.

## An example of the production strategy: The working process – based on multistakeholder involvement and empowerment

### The time span of the ECOREG project – the most important events

National seminar, Helsinki 08 Dec 2004

-key results of the ECOREG project

-target groups: Regional Environment Centres.

Regional Councils, Regional Employment and Economic

Development Centres

Project completed 31 Dec 2004

3. regional workshop, Kuusankoski 05 Oct 2004

-eco-efficiency indicators and the eco-efficiency of Kymenlaakso

-mechanism for eco-efficiency monitoring and evaluation and its utilisation RE (1)

2. regional workshop, Kotka 01 Dec 2003

- -economic indicators
- -environmental indicators
- -socio-cultural indicators
- -eco-efficiency indicators
- -eco-efficiency monitoring and evaluation mechanism

Project launched 01 Sept 2002

> 1. regional workshop, Kouvola 21 May 2003

- -concept of eco-efficiency
- -valuation task concerning environmental issues
- -valuation task concerning social themes
- -decision making events relating to eco-efficiency

### Direct implications of the ECOREG project

The concept of eco-efficiency found its way to Kymenlaakso's Regional Strategic Plan 2005-2015

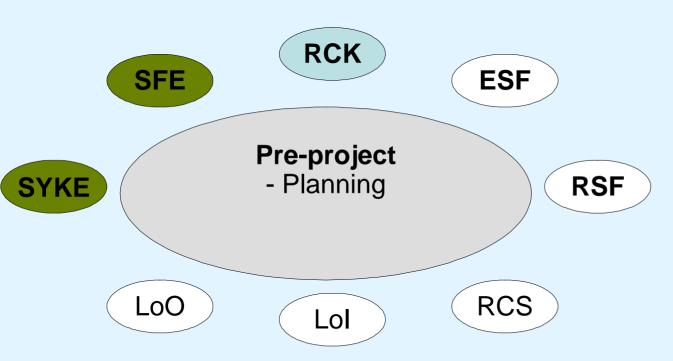

The following *vision* is formulated for the future Kymenlaakso:

"An attractive and eco-efficient, internationally interactive region"

Eco-efficiency also has a central role in Kymenlaakso's Regional Development Programme 2007-2010 that implements the Strategic Plan. Relevant ECOREG indicators are used for monitoring the Programme.

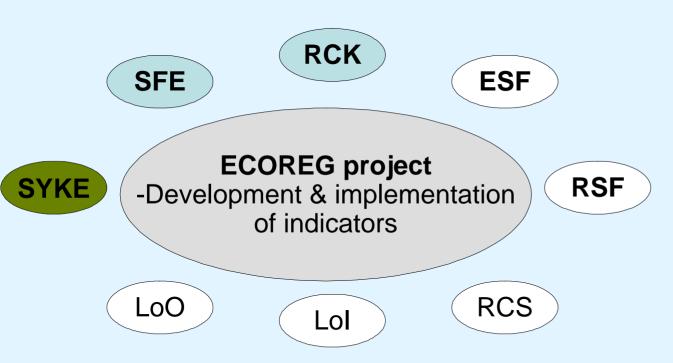

## Production, use and further development of the ECOREG indicators in Kymenlaakso, Phase 0, - 2002(9)

## Production, use and further development of the ECOREG indicators in Kymenlaakso, Phase 2, 2005-6

Legend SYKF = Finnish Environment Institute SFF = Southeast Finland Regional Environment Centre RCK = Regional Council of Kymenlaakso **ESF** = Employment and **Economic Development** Centre for Southeast Finland RSF = Regional Road Administration of Southeast **Finland** RCS = Regional Council of South-Karelia Lol = local industry LoO = other local actors

## Production, use and further development of the ECOREG indicators in Kymenlaakso, Phase 3, 2006 -

Legend SYKE = Finnish Environment Institute SFF = Southeast Finland Regional Environment Centre RCK = Regional Council of Kymenlaakso **ESF** = Employment and **Economic Development** Centre for Southeast Finland RSF = Regional Road Administration of Southeast **Finland** RCS = Regional Council of South-Karelia Lol = local industry LoO = other local actors

## Framing of an evaluation affects it's ability to be used for learning

"I can't help wondering if this deductive and problemfocused approach might not actually limit our creativity, innovation, and understanding of the process and impact of environmental programs and their evaluations." (Preskill 2009, 101)

- Sometimes vague and new concepts and framings may provide a better platform for learning than well established and externally imposed concepts and framings. The provide more space for learning through jointly constructing the concepts and framings.
  - Regional eco-efficiency (ECOREG)
  - Maybe: ecosystem services, eco-innovation, ...

### Key messages

- Production strategies, where users are involved in the whole evaluation process are especially important for promoting learning among 'intended users'.
- Dissemination strategies are important to increase the possibility of unintended use.
- Not only the empirical results and recommendations should be communicated it is also important to communicate theoretical results, evaluation methods and evaluation framings and further knowledge needs.
